Why choose Juice?

Juice is a bench desking system that is truly adaptable and reconfigurable, with comprehensive but simple drop-in cable management easily accessible via

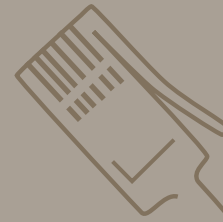

sliding tops. Juice offers a choice of frame styles, a wide range of finishes, and pedestals and storage units in timber or steel.

You can specify Juice to suit the look and feel you want for any environment, without compromising its competence or inherent flexibility.

Strength and simplicity

The frame structure is immensely strong – yet quick and simple to assemble or reconfigure. To extend a bench you simply add a central tower, support beams and cable tray, and move the end frame to its new position. No components are redundant.

Practical cable management

Cables are routed from floor level to cable tray via 'Power Towers' with pop-off side panels. The lay-in cable tray has ample space for excess cable and convenient mounting points for sockets. The sliding tops provide instant access.

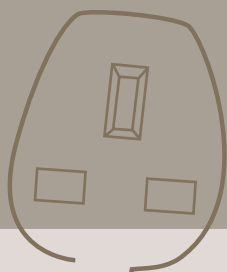

Multi-functional dividing screens

Juice offers two styles of dividing screen. The picture to the left shows ALU screens: the images below show the slimmer SPA screen. Both screen types can incorporate channels for mounting flat screen monitors and other accessories.

Freedom to move or personal space

Juice may be used to provide flexible space for multiple users or ad hoc work groups, or to create allocated space for permanent staff.

Choice of frame styles

Rectangular legs, 'J' legs or square legs. 'J' legs offer the additional option of height-adjustability

Storage to suit

Juice storage is available in all-timber (either MFC or veneer), or in steel, or in steel with timber drawer fronts/doors. You can tailor the look, feel and character of Juice to suit your particular preference and application.

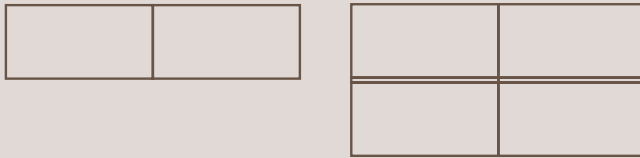

The extendable, flexible bench

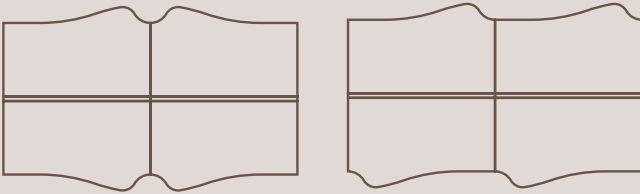

Single-sided or double sided, from an individual desk to a continuous bench of unlimited length. A wide range of worksurface widths enables the creation of long span shareable space or individual work units.

Wave

Double Wave

MFC finishes

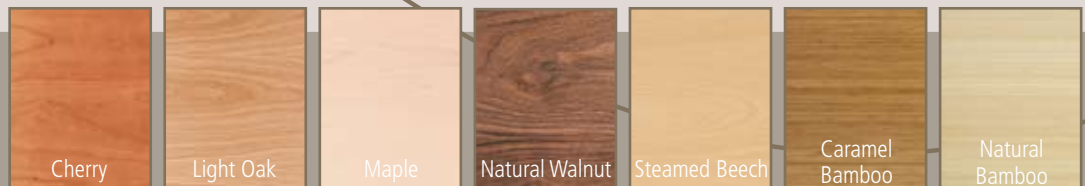

Shapes to suit

Juice offers conventional rectangular workspaces, single waves and double waves. Single waves – as shown below – are handed left or right, but the unique Sven Wave shape enables them to be combined in any sequence. Double waves curve around the user and provide a flexible, unhandred workspace.

Veneer finishes

Multi-purpose narrow benches

Juice offers narrow benches 600mm deep each side. This still provides a practical working depth but offers a worthwhile space saving over

the conventional 800mm depth. When specified without dividing screens, narrow benches create ideal conference tables.

Juice presentation centres can house plasma displays or projection screens. They can be wall-mounted, free-standing or even mobile.

Stand-alone desks

Complementary individual desks suit cellular offices and fit into restricted spaces – and maintain the same look and feel as the benches.
